

Position Analyses

Position Analysis #1 – Amazon Software Engineering Intern

[Software Development Engineer Internship - Summer 2026 \(US\) - Job ID: 3116030 | Amazon.jobs](#)

I think the most important quality Amazon is looking for is **ownership with a customer-focused mindset**. The posting emphasizes that interns will “own the entire lifecycle” of their code, from design to deployment, and that Amazon values “customer obsession” as part of its core culture. This shows they are not just looking for someone who can code, but someone who takes responsibility for building products that solve real customer problems and can work through ambiguity to deliver results. The work environment seems fast-paced and high-impact, where development cycles are measured in weeks and interns work on systems that affect millions of users. Interns are expected to build new features, collaborate with teams, and handle real-world engineering challenges at scale. Because of this, I think Amazon may be flexible on prior internship experience, but not on qualities like problem-solving, adaptability, and the ability to take ownership, since those are directly tied to their culture and the responsibilities of the role.

Position Analysis #2 – Cloudflare Software Engineering Intern

[Job Application for Software Engineer Intern \(Summer 2026\) - Austin, TX at Cloudflare](#)

I think the most important quality Cloudflare is looking for is a **builder mindset**. The posting repeatedly emphasizes people who do not wait for a polished roadmap, but instead notice problems, take initiative, and use new tools, including AI, to create solutions. It also says the ideal intern should be curious, proactive, able to complete projects, and able to learn and adapt to new technologies, which makes it clear that Cloudflare values initiative and follow-through just as much as technical skill. The work environment seems fast-moving, collaborative, and high impact. Interns are expected to ship real projects over 12–16 weeks, work cross-functionally, receive mentorship, and present their work to the company, which suggests a supportive but demanding environment where interns are treated like real contributors. Since Cloudflare says interns will push code that touches hundreds of millions of web users and develop at Internet scale, I think the company may be flexible on exact language background, but less flexible on curiosity, critical thinking, and the ability to get things done.

Position Analysis #3 – NVIDIA AI/Software Engineering Intern

[NVIDIA 2026 Internships: Software Engineering - US](#)

I think the most important quality NVIDIA is looking for is strong technical depth in systems and performance-focused engineering. The posting emphasizes working on accelerated computing, GPU systems, and optimizing software performance, which shows they want candidates who understand how software interacts with hardware and can build efficient, high-performance systems. It also highlights working on architecture, debugging complex system-level issues, and contributing to production software, which suggests they value engineers who can handle technically challenging problems beyond just basic application development. The work environment seems highly technical, innovative, and collaborative, where interns work on real projects that have measurable impact. The posting mentions contributing to infrastructure, data platforms, and system-level tools while working alongside experienced engineers, which suggests interns are treated as real contributors rather than just learners. I think

NVIDIA may be flexible on specific tools or prior internship experience, but they will not compromise on strong programming skills and problem-solving ability, especially in areas like C++, Python, or system design, since those are essential for working on high-performance computing systems.

Which Position I chose:

I would apply to the Cloudflare Internship because it best matches the kind of engineer I want to become. The posting focuses on builders who are curious, proactive, and able to complete projects at Internet scale, and that fits the kind of work I have done through Siemens Energy, Knight Hacks, and my personal projects. I think my strongest qualification is my experience building real software systems with measurable impact, especially backend and full-stack projects where I had to take initiative, work with a team, and deliver working features.

Eric George

12728 Sawgrass Plantation Blvd. • Orlando, Florida • 32824
(407) 752-5950 (mobile) • ericgeo324@gmail.com

Education

University of Central Florida

B.Sc., Computer Science

- Honors: Dean's List
- Awards/Scholarships: Pegasus Scholarship

Orlando, Florida

08/2023-05/2027

Experience

Knight Hacks

Software Engineer Intern (10 hours/week)

- Built a Stripe backend to process **1,000+ payments** with zero failures during high-traffic events
- Reduced latency by **25%** by creating a type-safe API with tRPC
- Improved development speed by **20%** by contributing to an Agile monorepo workflow
- Collaborated with teammates through sprint planning, code reviews, and Git-based development

Orlando, FL

02/2026-Present

UCF Society of Scientists and Engineers

Computer Science Tech Chair (5 hours/week)

- Led workshops on web development, AI, and algorithms to help students build technical skills
- Organized team projects and events to encourage collaboration and hands-on learning
- Supported members by sharing resources and guiding them through technical challenges
- Worked with leadership to plan initiatives and improve the organization's technical presence

Orlando, FL

07/2025-Present

Siemens Energy

Software Engineer Intern (20 hours/week)

- Built internal tools used by **1,000+ engineers**, helping improve daily workflows and system reliability
- Developed JavaFX interfaces and backend APIs to make data easier to access and use
- Reduced deployment time by **50%** by improving CI/CD pipelines and release processes
- Worked with engineers across teams to debug issues, test features, and ship reliable updates

Orlando, FL

08/2024-Present

Projects

Emergent

- Engineered a multi-agent system modeling **50+ personas** across disaster scenarios
- Designed scalable backend APIs using FastAPI to support real-time interactions
- Built full-stack application using Next.js and TypeScript
- Won *Best Overall Hack* at KnightHacks

SignHero

- Developed computer vision model achieving **>90% accuracy** with sub-50ms latency
- Built adaptive gameplay system to improve user learning and engagement
- Integrated machine learning with interactive frontend systems
- Awarded *2nd Overall* and *Best Game Design* at SwampHacks

Skills

- Programming: Python, JavaScript, TypeScript, Java, C++
- Frameworks: React, Next.js, FastAPI, TailwindCSS
- Tools: Git, Docker, AWS, CI/CD
- Concepts: Distributed Systems, APIs, Machine Learning

Cover Letter

March 29, 2026

To Whom It May Concern:

I am applying for the **Software Engineer Intern (Summer 2026) role at Cloudflare**. I am a Computer Science student at the University of Central Florida with experience building backend and full-stack systems, particularly focused on scalability, performance, and shipping real-world applications. I am especially drawn to this role because Cloudflare is looking for curious, proactive builders who can ship real projects and learn at Internet scale.

As a Software Engineering Intern at Siemens Energy, I built internal tools used by over 1,000 engineers and improved CI/CD pipelines, reducing deployment time by 50%. That experience taught me how to contribute to production-level software, work across teams, and focus on reliability and efficient delivery. In my work with Knight Hacks and personal projects, I have also built systems with measurable impact, including backend features, APIs, and full-stack applications that required both technical problem solving and collaboration. These experiences have prepared me well for a role where interns are expected to ship projects with autonomy and support.

I am particularly interested in Cloudflare because of its mission to help build a better Internet and because engineers at the company work on software that affects millions of Internet properties around the world. I would be excited to contribute to that kind of environment, especially one that values iteration, curiosity, and the ability to get things done. Cloudflare's engineering culture and technology stack strongly align with the kind of work I want to continue developing in.

I would welcome the opportunity to further discuss my qualifications. I can be reached at (407) 752-5950 or ericgeo324@gmail.com.

Sincerely,
Eric George
